

The game plays the role of a field mouse, which needs to dig for gold and get out of the trap it got into. To do so, it needs to swipe the keys on the keyboard. All the keys on the keyboard move with the mouse pointer. Try to prevent the field mouse from escaping. If you do, the game will be over. Red5 Media Player Client is a cross-platform browser based media player used to stream video and audio from local file or Internet URL. There are a couple of red5 media players which can be installed in your computer. red5 media player is simple, easy to use and can be used on the internet Features of red5 media player: * Plays videos online, and online video streaming on the iPhone, iPad, iPod Touch, Android, or Blackberry phone! * Plays audio online and online audio streaming on the iPhone, iPad, iPod Touch, Android, or Blackberry phone! * Use for online video and online audio streaming on a Windows PC! * No downloading, no copying, and no storage space are required! * Many advanced features are available to the user to allow him to enjoy a very rich streaming experience. * play online videos and online audio streaming from any website using a "Read" type browser that is not from the Microsoft Internet Explorer! * Play the streaming videos from any website, anywhere and anytime. * Play videos in full screen mode! * Plays all types of files and formats like wma, wmv, flv, rmvb, 3gp, mov, mp4, avi, mpg, mpeg, dv, h264, mpeg2, mpeg4, xvid, asf, 3gpp, mp3, mp2, wma, aac, ogg, oga, ac3, aac+dts, ac3+dts, mp4+ac3, mp4+dts, mp4+eac3, mp4+h264, mp4+h265, mp4+m4a, mp4+m4b, mp4+m4r, mp4+sop, wav, aiff, wma, m4a, ac3, aac+dts, aac+eac3, aac+mp3, m4b, mp3, 3gp, 3g2, ac3, 70238732e0

It is a macro which work like builtin function of the DWG software; It can store up to 50 macro's (block, tab, shortcut) in one memory. (2G memory available) Keymacs can be used for memorize geometry transformation such as translation, rotate or scale. KEYMACRO allows to set a global macro (e.g. a translation block) and to set the location and orientation of the macro, by mouse or menu. Keymacro allows to trigger the macro with a keystroke. Keymacro can only trigger one macro on a keystroke. So, with Keymacro we can memorize an animation (or any other operation) on the DWG by using a short block keymacro. By the way, it is a native macro of the DWG software! Additional info about keymacro: There is no limitation for the size of the macro : it can be bigger than the DWG memory limit (2G in this case) Keymacro need some memory before you trigger it, so it's better to trigger it first if you want to memorize some big operations. If you want to memorize a keymacro when a keystroke is detected, you can use keystroke macro. And here are some screenshots of Keymacro: 1) You can memorize any geometry and scale it with the command "Keymemorize geometry". 2) You can memorize any geometry and translate it with the command "Keymemorize geometry translation". 3) You can memorize any geometry and rotate it with the command "Keymemorize geometry rotation". 4) You can memorize any geometry and scale it with the command "Keymemorize geometry scale". Thanks in advance. The author has been doing some updates since then, including the inclusion of the following features: A new version of CADAuno, a new version of Keymacro, a new version of MyMacro, and a new version of Keystroke Macro. Thanks for your comments. I will try to answer your questions 1) You can memorize any geometry and scale it with the command "Keymemorize geometry". 1) You can memorize any geometry and translate it with the command "Keymemorize geometry translation". 2) You can memorize any geometry and rotate it with the command "Keymemorize geometry rotation"
