LanSchool is the one essential tool teachers need to be successful in a 21st century classroom. Tom Lockwood, Hemlock Public Schools. Bacillus Subtilis
Bacillus subtilis is a gram-positive bacterium, a rod shaped and facultatively sporulating organism, with spores spherical in shape. It is motile by a single
polar flagellum and non-spore forming. The species was first described in 1923 by Rutgers University botanist Albert Hofmann and colleagues, who
isolated the bacterium from soil. This bacterium causes diseases of grains such as potato blight. References External links Type strain of Bacillus subtilis at
